American Air & Water, Inc.  
Warren Lynn, President  
12 Gibson Drive  
Hilton Head Island, SC 29926

Dear Warren,

Siemens Water Technologies, Inc. is happy to announce that the UV Liquid Sugar Disinfection System that American Air & Water, Inc. has been selling, model number SUN-12E-HO-LS with 2" Tri Clover clamp, has become the new standard for their Liquid Sugar systems.

This will be the only model available for liquid sugar applications until further notification. As a result of standardizing, Siemens will be able to process orders and produce these units on a normal 6-8 week delivery schedule with order received beginning in January 2010. Spare parts will be maintained in stock for timely service of these units.

This proven technology helps the customers disinfect their liquid sugar product and keep it in compliance with all codes and regulations. By making it a part of its standard product offering to American Air & Water, Inc. Siemens Water Technologies will ensure timely delivery of complete systems and spare parts.

Kind regards,

Richard M. Wileczek  
VP/General Manager Disinfection USA
